

NEWS & EVENTS

On 21 April 2004 the Navy Lakehurst Fire & Emergency Services was dispatched for an emergency medical call for a patient with chest pains on the second deck of Hangar 3, building 149, on-board NAES Lakehurst. The response to this EMS assignment was Engine Company 6321, Med 1 and Chief 6310. The responding units quickly responded and assessed the patient with the aid of MONOC paramedics. The emergency crews quickly determined that the patient required rapid transport to an emergency medical facility, as it was determined that the patient had serious cardiac compromise.

While transporting the patient to Community Medical Center in Tom's River, the patient became breathless and pulseless, just outside the main gate of NAES Lakehurst. The EMS crew called for additional manpower from Engine Company 6321 and with the aid of MONOC paramedics rapidly intervened with emergency treatment through defibrillation and CPR.

Through the rapid emergency medical intervention and transport of this patient to Community Medical Center, by the Navy Lakehurst Fire & Emergency Services and MONOC Paramedics, the life of this patient was saved.
